

Daniel (Leyuan) Tang

Houston, TX | Phone: 903-969-5236 | Email: leyuantangcollege@gmail.com | LinkedIn: www.linkedin.com/in/danielus-tang

Education

Texas A&M University

Bachelor of Science in Computer Science
Corps of Cadets

College Station, TX

Expected May 2027
Fall 2025 – Present

Tyler Junior College

Associate of Science in Computer Science
Associate of Arts in Piano

Tyler, TX

May 2025

Skills & Interests

- **Programming:** C, C++, Python, Java, JavaScript, Haskell
- **Frameworks and Tools:** Linux, Node.js, MySQL, Pandas, Redis, Nginx, Spring Boot, WebSocket, Apache POI
- **Language:** English (Working Proficiency), Mandarin (Native), Japanese (Conversational)

Experience

TJC Summer Camp, Tyler Junior College

June 2025 – August 2025

Coding Camp Assistant

- Mentored a cohort of 30 children in fundamental **Python** programming, guiding them from basic syntax to building games on Roblox. Debugged and refactored student code, teaching best practices for logic and readability.

Apache Tutoring Center, Vaughn Library, Tyler Junior College

Jan 2024 – May 2025

Peer Tutor in computer science

- Adapted technical explanations for students of varying skill levels, improving their understanding of complex topics on Data Structures and Algorithms.

Technical Projects

Enterprise Food Delivery Management System

May 2025 – July 2025

Spring Boot | MySQL | Redis | Spring Cache | WebSocket | Apache POI

- Architected a high-concurrency food ordering system. Solved the "Hot Key" problem for menu browsing by implementing Spring Cache and Redis, ensuring data consistency between the cache and database.
- Built a real-time order notification system using WebSocket to push incoming order alerts and client reminders to the merchant dashboard instantly.
- Developed a robust background task scheduler using Spring Task to automatically handle order timeouts and daily status checks (e.g., closing unpaid orders after 15 mins).
- Optimized data storage by separating cold and hot data; utilized Apache POI to generate complex operational reports (Excel) for merchant business analysis.
- Configured Nginx for reverse proxy and load balancing to support separation of front-end and back-end resources.

High-Throughput ECG Data Retrieval Client

September 2025

Linux API | Named Pipes (FIFO) | Bash | Git

- Developed a high-performance C++ client to query and aggregate large datasets of medical electrocardiogram (ECG) signals from a local server.
- Optimized large file transfers (100MB+) by implementing a segmented download logic, efficiently handling memory buffers and minimizing I/O overhead.
- Conducted performance benchmarking to analyze transfer times across varying buffer sizes, identifying system bottlenecks in pipe bandwidth vs. disk I/O.
- Ensured resource safety by implementing clean-up routines to close open file descriptors and remove temporary FIFO files upon termination
